

Asset Tracking of Shelving Systems

The KSI SmartButton Technology may be applied to any shelving system or room. GFMS™ software provides tracking and monitoring options for detailed reporting. Our easily installed modules make retrofitting of your current storage area quick and easy.

Unique Serial Identification

This technology provides each asset with a unique identity by registering serial number on the button. Our USB SmartButton Enrollment Station registers each serial number in GFMS with ease.

Global Facilities Management System

GFMS™ combines sophisticated and adaptable, web enabled, PC-based software with no client installs. Dynamic integration and custom application are cornerstones of our philosophy towards system management.

Key Systems, Inc. will help you formulate an asset management strategy specific to your facility's requirements, regardless of size, scope and pre-existing technology.

System Requirements

- Microsoft® XP Pro / Server 2000 / Server 2003 / Server2008 / Vista / Vista Business / Vista Ultimate / Windows7
- 2 GB hard disk space for initial install
*Database consumption will increase with time and system size
- Network connection

KSI Asset Vault

You've seen the KSI Smart Button Asset Vault, now expand your options. The same technology used in the Asset Vault can be applied to virtually any existing shelving system or room. Large or bulky items that may not fit inside

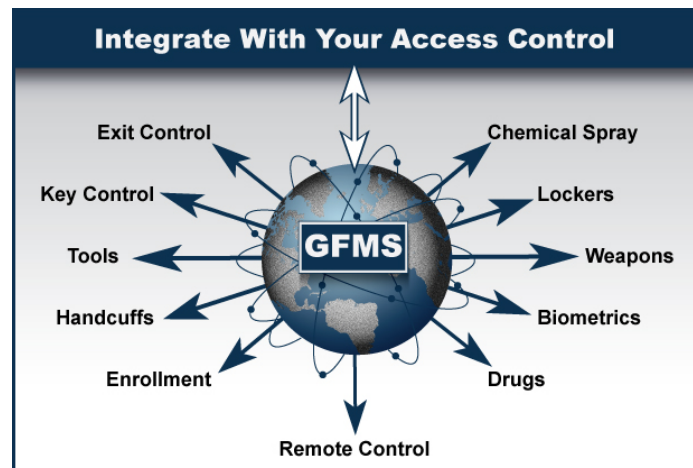

the vault are now able to be fully tracked and monitored through GFMS.

KSI Satellite

The KSI Satellite can be easily located on any flat surface including your shelving units. Secure and monitor an entire room by wall-mounting the unit for use as a door control. Additional ID devices are available with this unit.

Each of these products can be interconnected and work seamlessly with other Security Asset Manager products through your network and our GFMS software.
